Passive Sampler and Transplant Mussel Retrieval:	09/29/2009 12:37 PM

Item Body

Dear Jim & Steve:

I wanted to confirm that the following EPA personnel and contractors are planning to access the Levin-Richmond Terminal immediately adjacent to the Lauritzen Channel on Thursday October 1st, 2009. These activities were previously discussed and are in conjunction with the deployments performed on the week of August 31st-September,

EPA and their contractors will be retrieving passive samplers and transplanted mussel samples in the Lauritzen Channel, Parr Canal and Santa Fe Channel between 8 am and 3 pm on Thursday October 1st, 2009.

Julie Spahn discussed the upcoming retrieval work with Manson Construction Representative Steve Gregory on September 29th, 2009. We understand that Manson is currently storing and staging barges and equipment in the Lauritzen Channel in anticipation of a large scale deployment in the near future. Ms. Spahn and Mr. Gregory agreed that the field team will review the locations of barges in the Channel on and discuss by phone needed coordination to facilitate access to sampling points within the channel, as feasible.

We anticipate the following field staff request access to the LRTC site on Monday:

Andy Lincoff - EPA

Ricardo Carmoda - CH2MHILL/E2

Tamara Davis - CH2MHILL /E2

If there are any concerns regarding this schedule or if you have any questions, please give me a call at (510) 552-8235.

Regards,

Julie Spahn, PE
